***CONCLUSIONS PRINCIPALS DEL FERRMED
STUDY OF TRAFFIC AND MODAL SHIFT
OPTIMISATION IN THE EU
+FIRST SYSTEM IMPLEMENTATION PLAN***

CECOT
Terrassa, 1 d'octubre de 2024

OBJECTIVES OF THE STUDY (I)

Considering that there has been no increase in EU rail freight share in the last 15 years (17.9 % in 2005 and 17.3 % in 2017) and that the EU Transport Extended Core Network is too vast (c.80,000 km), **the shift from road to rail requires the concentration of investments in a selective part of the main corridors of the Extended Core Network. To identify** the most heavily used sections in the EU land transport network and **the best procedures to transfer freight from road to rail**, FERRMED has initiated a major study highlighted below.

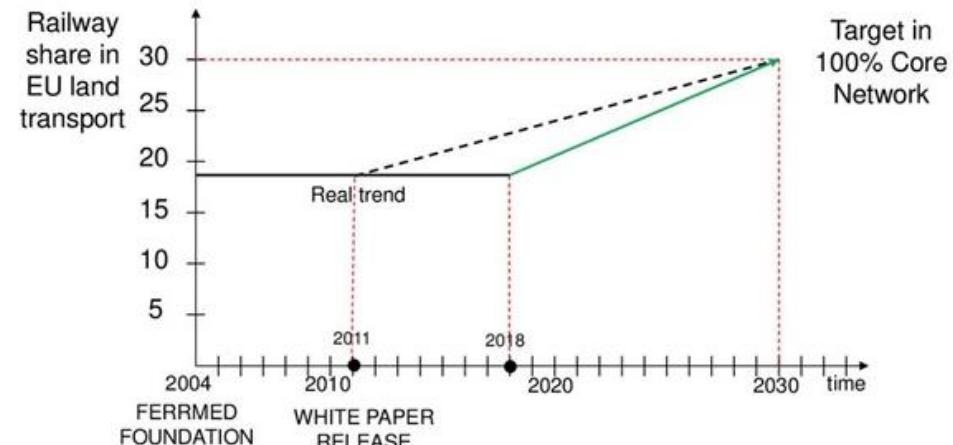

OBJECTIVES OF THE STUDY (I)

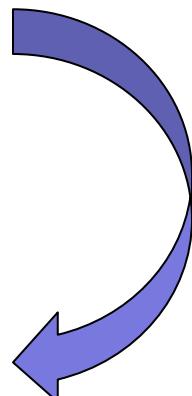

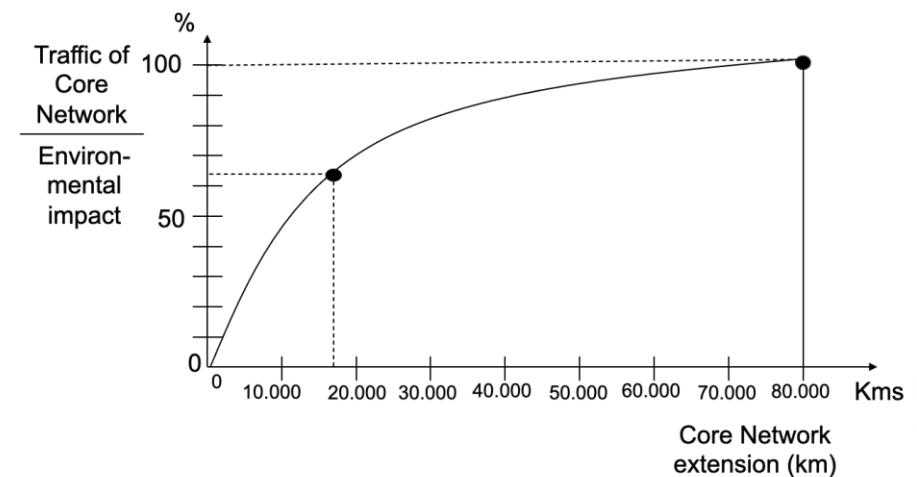

BACKGROUND

- ❖ In 2015 transport volume in the EU-28 was **19 billion tonnes** of goods transported (**or 2,385 billion tonne-kilometre**). In terms of tonne-kilometre, **75% was transported by road, 18% by rail and 7% by barge**.
- ❖ The major part (around 55%) of total road freight transport performance was over distances of more than 300km of which, roughly one third, were over more than 1000km.
- ❖ The impact of road freight transport on the environment is massive: some **275 million tonnes of CO₂** per annum representing **30% of total GHG emissions of the transport sector** as a whole.

RAILWAY SHARE REAL VERSUS PLANNED

FERRMED APPROACH TO ACHIEVE AT LEAST 65% OF "WHITE PAPER" TARGETS IN 2030

OBJECTIVES OF THE STUDY (II)

The objectives of the study are:

- **To identify current total freight transport by mode** in the main corridors of the EU Core Network (EU Backbone Network);
- **To identify the main logistic hubs in the EU**
- **To define a new integrated Rail-Road system of transport for freight**
- **To propose an Action Plan to achieve the EC (2011) White Paper on Transport Policy targets by 2030** (30 % of inland freight transport over 300 km carried by rail or barge) **and “Green Deal” targets**, in the most heavily used sections of the corridors, covering 65 % of the traffic (tonne-kilometres) related to the EU Extended Core Network.

TASK FORCE

It has been a major study work. The task force involved consisted of:

- **24 experts:** academics, engineers, economists, geographers and senior analysts from all over the EU
- **12 students:** from Economics, Engineering and Geography Faculties
- **2 Universities involved:** Antwerp University and Barcelona University
- **1 Consultancy:** Mcrit
- **45,000 work hours spent:** between June 2019 and October 2023

DETERMINATION OF THE EU BACKBONE NETWORK

First priority
(18,040 km)

Second priority
(8,500 km)

Third priority
(50,700 km)

DATA COLLECTION OF THE EXISTING INTERMODAL TERMINALS IN THE EU

	Classification of L/U	Europe	Share (%)
<250m	A	127	19.7
251 m - 500 m	B	280	43.5
501 m - 700 m	C	163	25.3
701 m - 750 m	D	47	7.3
>750 m	E	27	4.2
Total		644	100
Pass through		79	12.3
Dead end		565	87.7
Possible pass through		66	10.2
C possible enlargement (750 m)		5	0.8

Note: Existing Intermodal terminals in continental EU + Switzerland

EU STRATEGIC SOCIO-ECONOMIC HUBS

To identify and determine the EU hubs, 4 factors were used as a selection criteria: Population, Input-Output flow, GVA and the Combined Index.

- **Inflows, outflows:** total freight volume handled per day for distances over 300 km resulting from the matrix of flows (based on ETIS+).
- **Manufacturing Gross Value Added (GVA):** the value added of manufactured goods produced in an area or an economic sector linked to manufacturing activities.
- **Population:** First filter to select the main EU urban agglomerations as candidates to become a Strategic Hub. For the Strategic Hubs, the population of their corresponding urban agglomeration has to exceed the 1 % of the EU population (4.5 m inhabitants). For the EU Interrelated Hubs, their population has to be between 0.5 % and 1 % of the total EU population (2.2 to 4.5 m inhabitants).
- **Combined Index:** value resulting from combining the population, GVA and inflow-outflow values.

FORECAST TRAFFIC SCENARIOS

❖ Mid term stagnant (2025)

- The target is **23%** of tonne-km by rail on **average in Europe** and in each **individual country** (as much as possible).

❖ Long term stagnant (2030)

- The target is **30%** of tonne-km by rail on **average in Europe** and in each **individual country** (as much as possible).

❖ Long term (2030) 20% increase

- We start from the 2030 stagnant scenario
- On top of it we add globally 20% traffic in all sections and modes

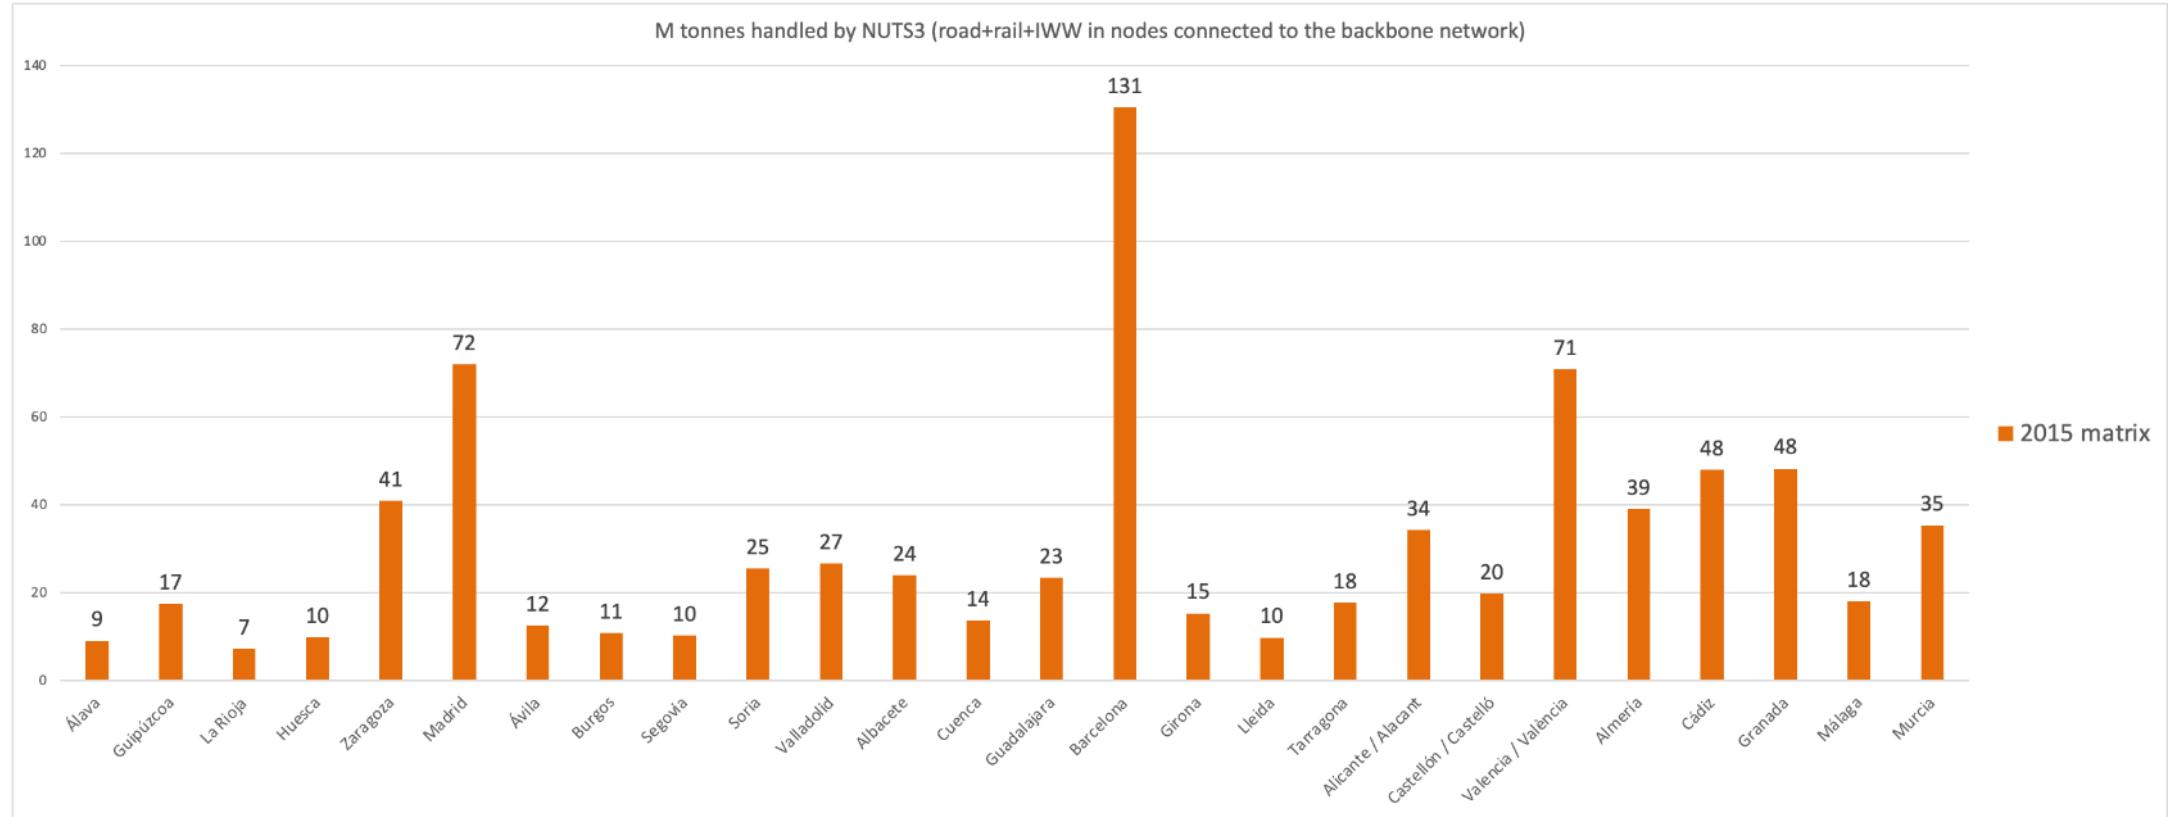

❖ Long term (2030) +20% with port traffic reequilibrium

- We start from the 2030 +20% scenario
- The assumption that the increase of traffic in the Mediterranean – Eurasian route in the future will be: 20% on the Northern basin and 80% on the Southern basin, until reaching approximately a 60/40 share north/south

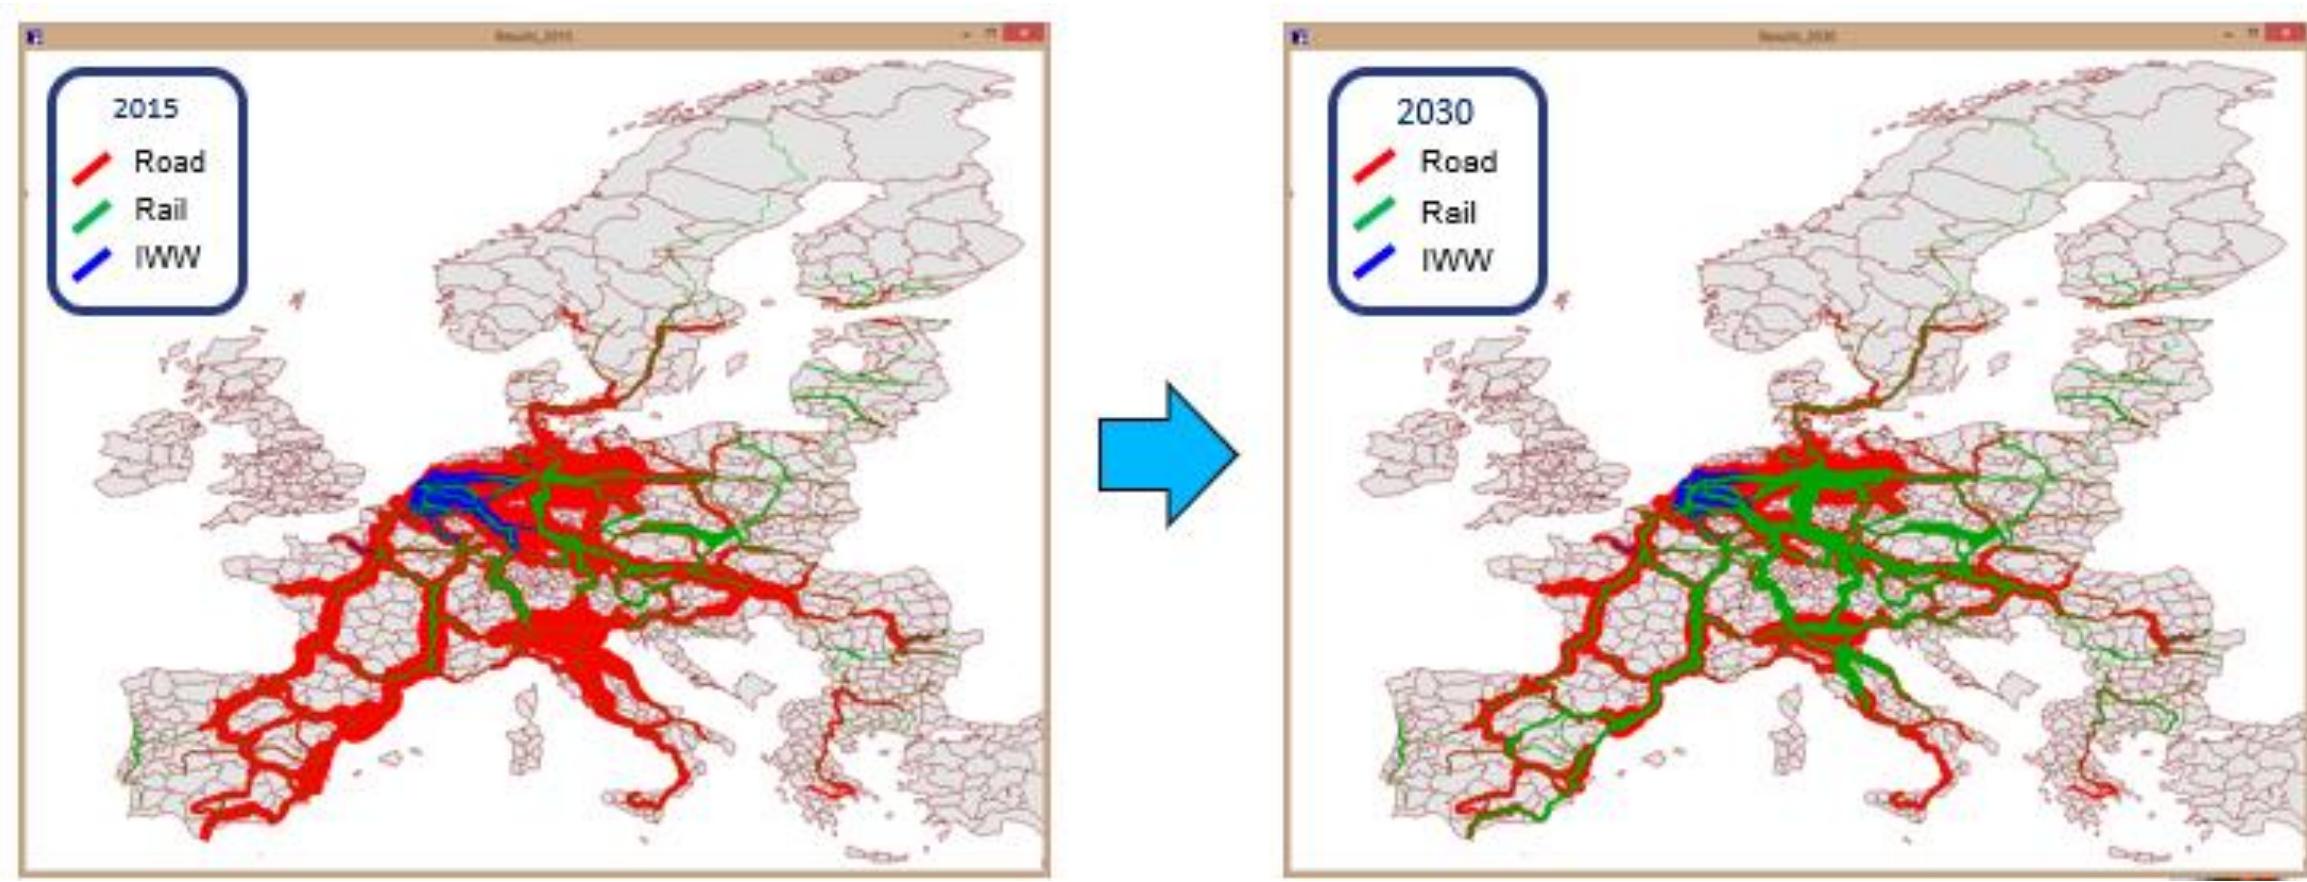

FORECAST TRAFFIC SCENARIOS

ACTIONS IN INTERCONNECTION LINKS AND TERMINALS

As a result of the terminal capacity analysis, **425 additional new +FIRRST terminals** are required across the EU (plus Switzerland) to handle the rail traffic increase to achieve a railway share of 30 % over distances of 300 km

Location of +FIRRST new terminals

Promotion du Grand Axe Ferroviaire de marchandises
Scandinavie-Rhin-Rhône-Méditerranée Occidentale A.S.B.L

**FERRMED, FAST, FLEXIBLE,
INTEGRATED RAIL-ROAD
SYSTEM OF TRANSPORT
(+FIRRST)**

WHY +FIRRST? (I)

Nowadays, railways are practically only used for **point-to-point** transport with complete trains. **Single wagon** procedures are used for **bulk products, mainly mining and chemicals, but not for manufactured or agrifood products**. For perishable products and those involving manufacturing processes, which require **just-in-time deliveries**, railway performance is not in line with shippers' requirements.

WHY +FIRRST? (II)

The only way to achieve the EC targets of road traffic transfer to rail is to incorporate a system that can move isolated truck semi-trailers, swap-bodies and containers (ILUs) from and to different destinations in a fast, flexible, integrated rail-road system of transport (+FIRRST). It is a novel way of organising intermodal rail-road transport in the form of 'Mobility as a Service' (MaaS).

+FIRRST is an integrated combined transport system fully aligned with the road (as the most flexible mode), able to meet demand in real time.

+FIRST BASIC REQUIREMENTS (I)

- Rail Network with: ERTMS (or equivalent) Control/Signalling system, P410/400 (or similar) loading gauge allowing 740 m long trains
- A set of specific intelligent freight trains with multipurpose wagons that can carry HGV semi-trailers, swap-bodies and containers (minimum length 740 m)
- A set of dual locomotives (electric+batteries/diesel) able to carry freight trains of 1,800 – 2,000 t gross weight at 100 – 120 km/h.

+FIRST BASIC REQUIREMENTS (II)

- Three kinds of trains are envisaged:
 - **Point-to-point (Ptp)** for interconnections with enough traffic between origin/destination nodes to achieve full trains.
 - **Stop at predetermined intermediate terminals (Sai)** between the origin/destination nodes, covering the demand of all required intermediate nodes.
 - **Stop on request (Sor)**, for emergencies/urgent deliveries, additionally to the predetermined stops of Sai trains.

+FIRRST INTERMODAL TERMINALS (I)

General characteristics

+FIRRST terminals are “pass-through”, so no shunting locomotives are required. They will usually have three basic elements:

- Central Loading/Unloading (L/U) zone
- Two buffer zones (either side of the central loading/unloading zone)

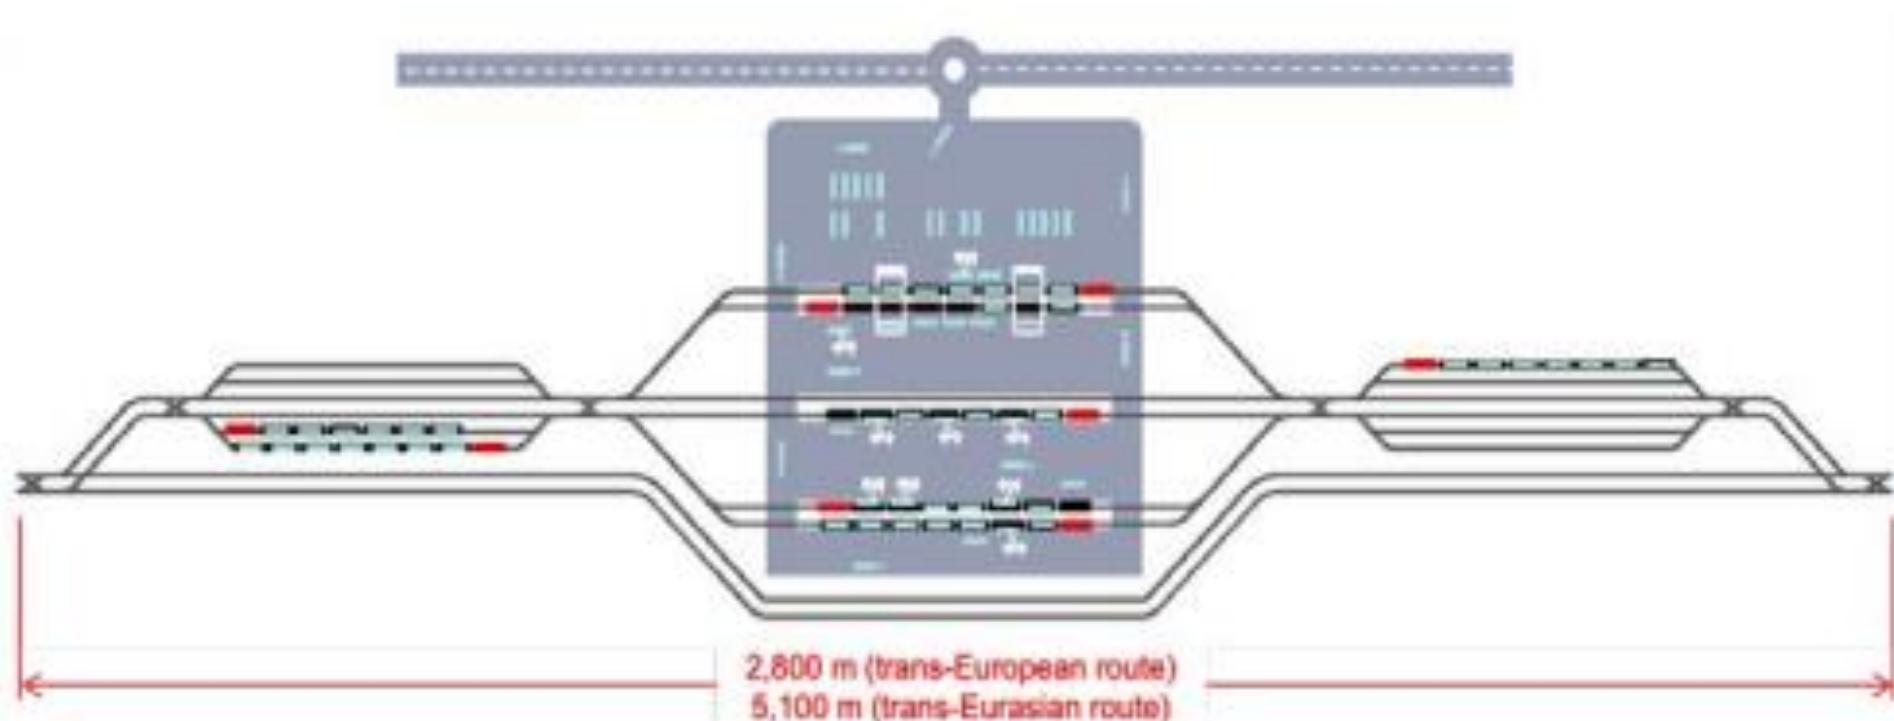

The central loading/unloading zone usually has:

- Adequate space for HGV parking (in-out and safe), storage (for all kind of ILUs, including reefers), offices and appropriate loading/unloading devices (cranes, reachstackers, etc.)

IMPLANTACIÓ DE LES CONCLUSIONS DEL FERRMED STUDY A CATALUNYA

MAPA DE LES TERMINALS +FIRST A CATALUNYA

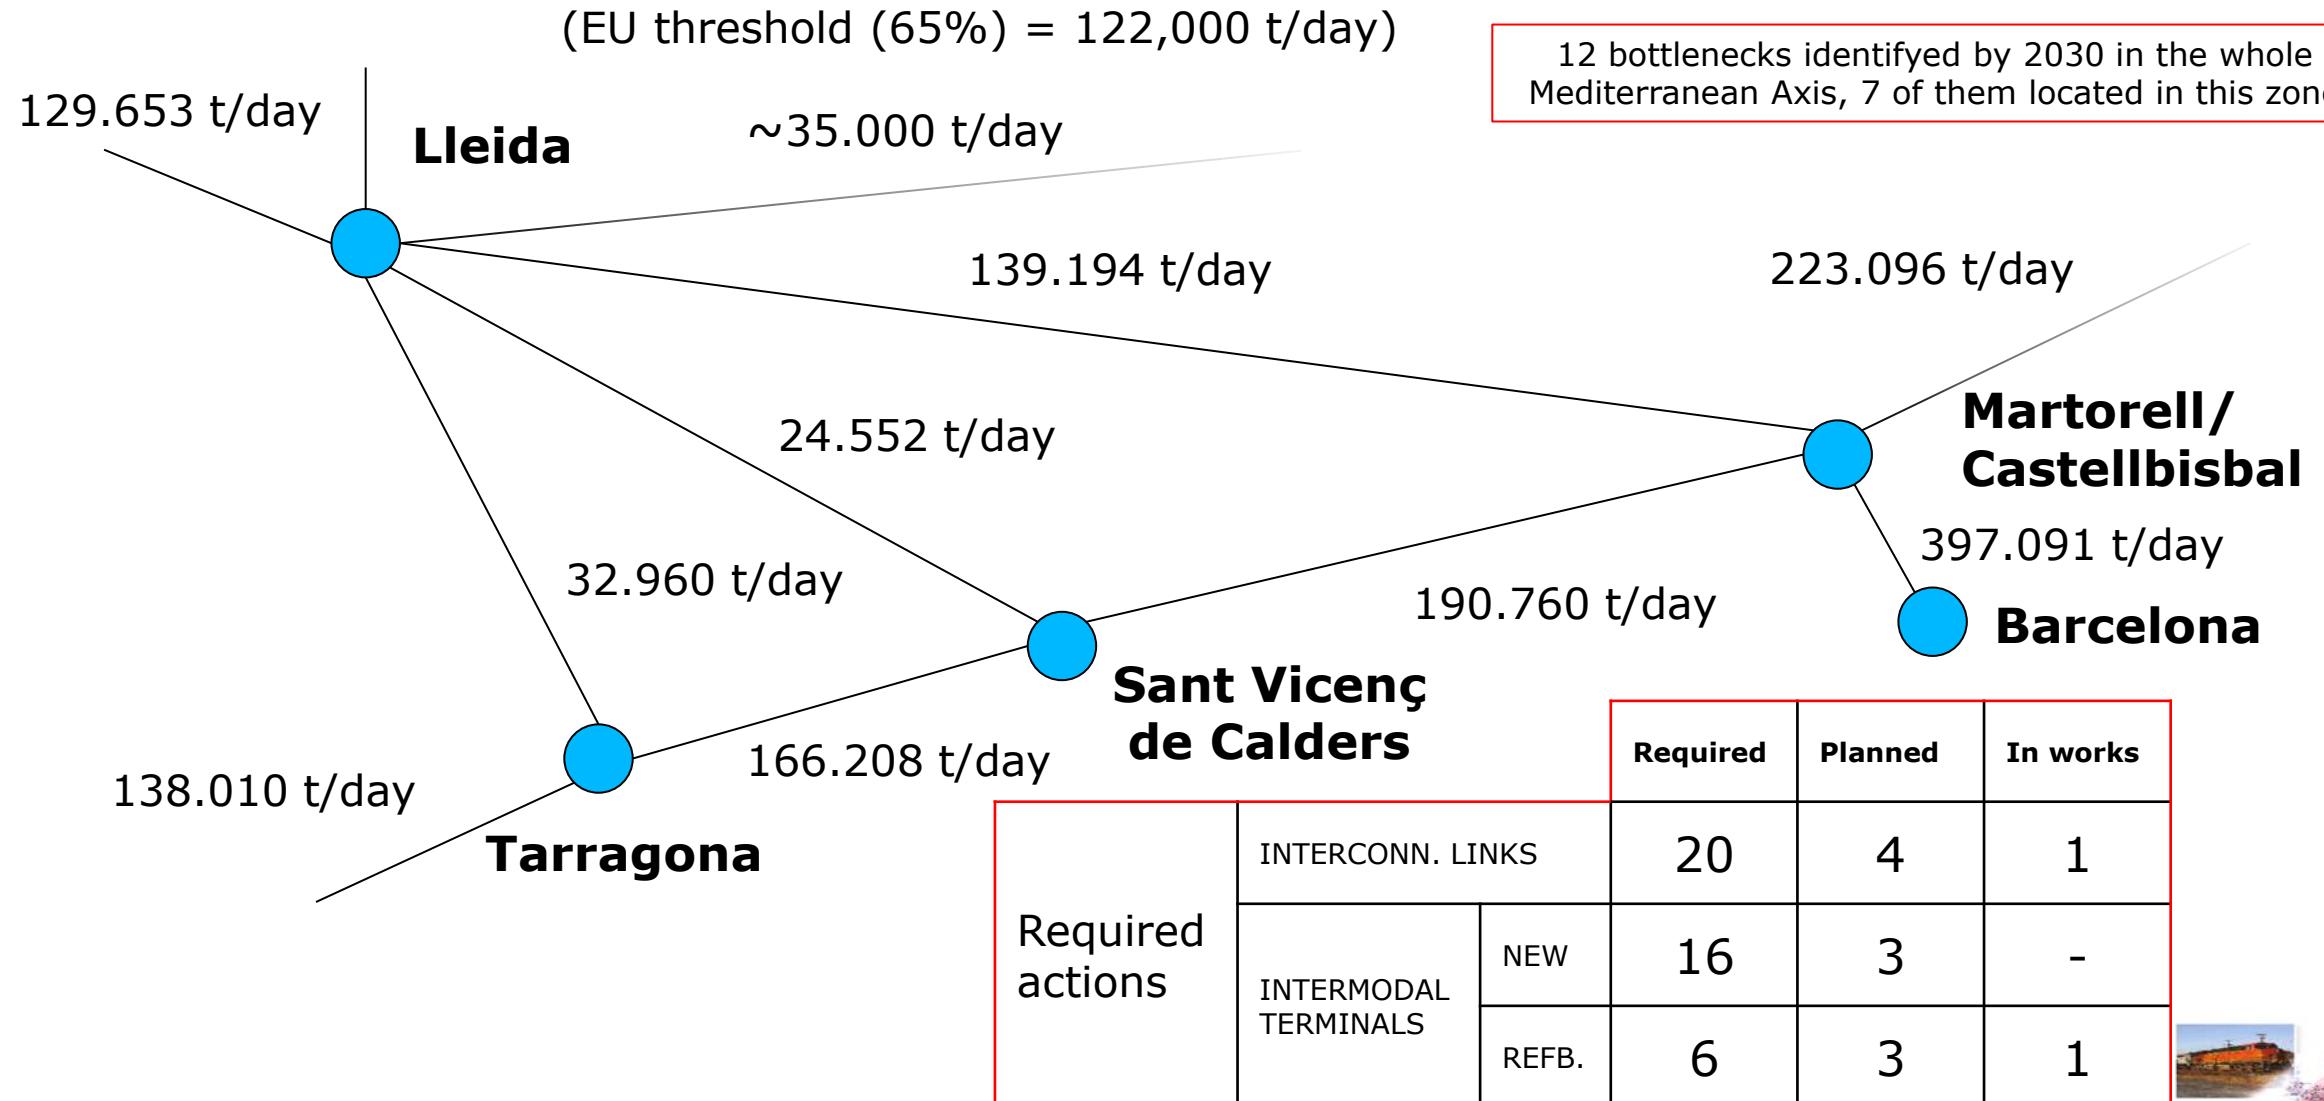

NOVES TERMINALS INTERMODALS A CATALUNYA

❖ Noves terminals intermodals

- **Demarcació de Girona:** Vilamalla, Celrà, Fornells de la Selva
- **Demarcació de Barcelona:** Granollers, La Florida, antiga llera del Llobregat, Castellbisbal, Igualada, Manresa, Manlleu
- **Demarcació de Lleida:** Torreblanca, Bellpuig, Les Borges Blanques
- **Demarcació de Tarragona:** L'Arboç, La Boella, Constantí, Nulles, Montblanc, L'Aldea

CONFLUENCE BETWEEN EBRO AXIS – MEDITERRANEAN AXIS (DAILY FREIGHT VOLUMES)

ACTUACIONS REQUERIDES A LA XARXA FERROVIÀRIA DE CATALUNYA

- ❖ Resoldre la problemàtica del Triangle “Barcelona – Lleida – Tarragona”. Conversió de Lleida i rodalies en un gran pol logístic de l’Eix de l’Ebre
- ❖ Noves línies
 - Sant Celoni – Mollet (*per segregar mercaderies i rodalies*)
 - Castellbisbal – Martorell – Vilafranca – St. Vicenç – Constantí – Reus
 - by-pass Castellbisbal – Martorell (SEAT) *per segregar mercaderies i rodalies*
 - afegir una via més a la línia actual fins a St. Vicenç
 - refer la línia abandonada St. Vicenç – Roda – Constantí – Reus
 - Cervera – Igualada – Martorell (*nou traçat*)
 - Lleida – Tortosa (*nou traçat*)
 - Tarragona – València (alta velocitat)
 - Nous accessos als ports de Barcelona i Tarragona
 - Nous accessos, passants interconnectats, als aeroports de Barcelona, Girona i Reus
 - Noves línies de rodalies a l’Àrea Metropolitana de Barcelona

ACTUACIONS REQUERIDES A LA XARXA FERROVIÀRIA DE CATALUNYA

❖ Reformar les línies actuals

- Saragossa – Lleida – Tarragona/Valls – Sant Vicenç: conversió a ample internacional en via doble
- Tarragona – Vila-seca – L’Aldea/Tortosa – Castelló – València: conversió a ample internacional
- Conversió a ample mixt de la línia Castellbisbal – Martorell – Sant Vicenç – Tarragona – Reus – Casp – Saragossa
- Conversió a ample internacional de totes les restants línies convencionals de Catalunya
- Afegir una via a la línia Castellbisbal - Mollet
- Desdoblar la línia Montcada – Puigcerdà en el tram Montcada – Manlleu/Ripoll
- Noves interconnexions entre línies a les zones de Vilaseca, Reus, Picamoixons, Granollers, Tortosa
- Adaptació per a trens de 1.500 m a les línies Barcelona – Castellbisbal – Mollet – frontera francesa

FERRMED STUDY OF TRAFFIC AND MODAL SHIFT OPTIMISATION IN THE EU

ÀMBIT DEL CORREDOR MEDITERRANI

Estat Espanyol

Inversions segons el pla del Ministeri de Foment presentat a Barcelona l'any 2011, afegint alguns trams ferroviaris mancants estudiats per FERRMED.

Resoldre la problemàtica de les Rodalies de Barcelona i València.

Línia doble des de la frontera francesa fins a Algesires.

Noves terminals i reconversió/ampliació d'algunes de les existents en tot el recorregut i nous accessos als ports de Castelló, Cartagena, Sagunt i Almería.

República Francesa

By-pass Est per a mercaderies a l'aglomeració de Lyon.

Nova línia Montpellier – Perpinyà.

Noves terminals i reconversió/ampliació d'algunes de les existents en tot el recorregut.

ACTUACIONS REQUERIDES A LA XARXA FERROVIÀRIA DE CATALUNYA

Total investment in the EU in B€

Links and terminals	EU/Member State	481.9
	FERRMED	77.27
	Total	559.17

Total investment in Catalonia in M€*

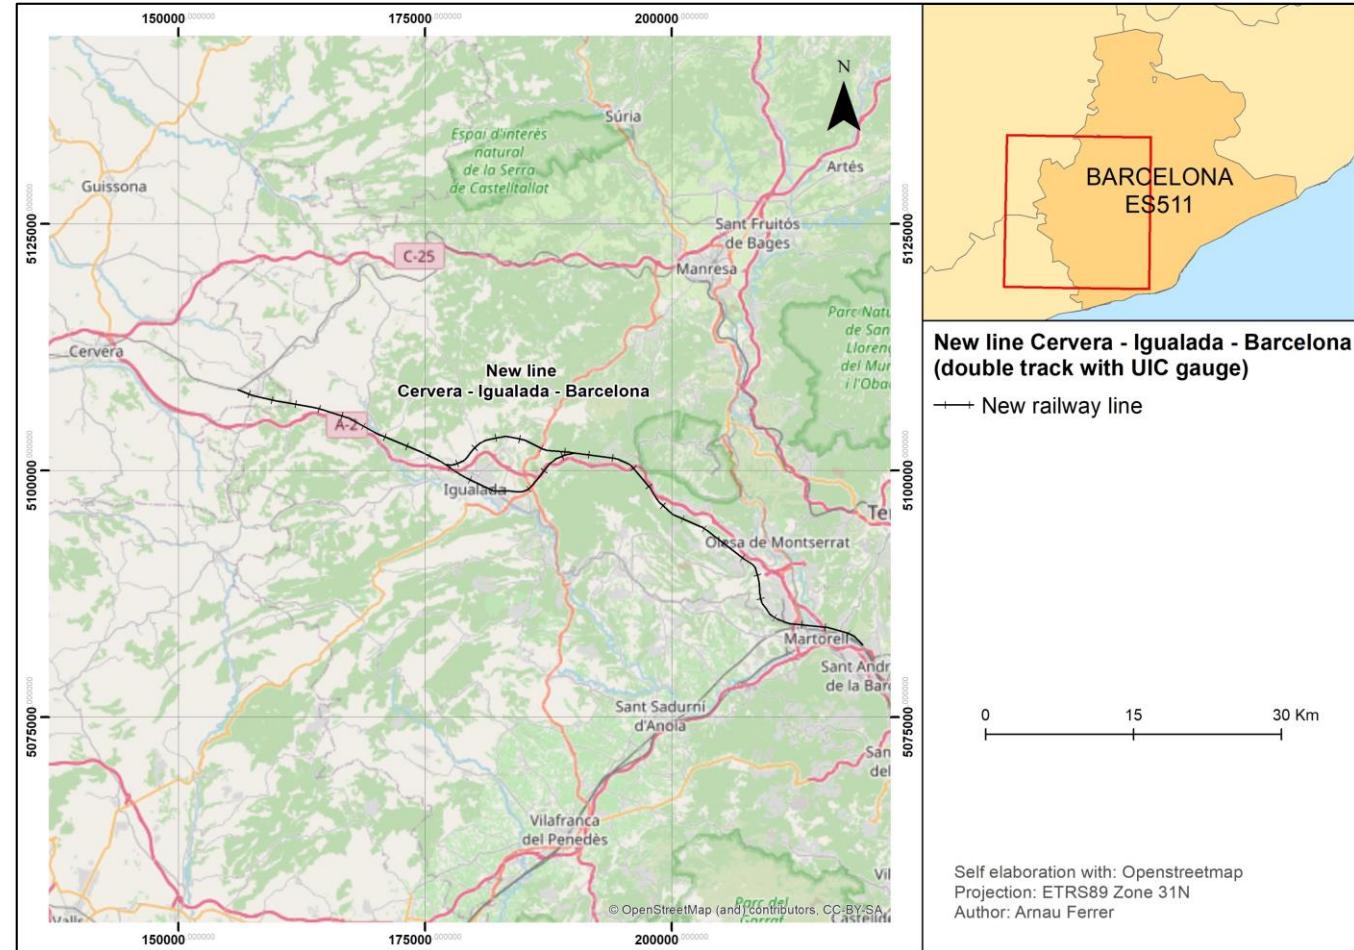

Links and terminals	EU/Member State	6.117	1,3%
	FERRMED	9.857	12,8%
	Total	15.974	2,9%

*No inclou l'import de les noves línies de rodalies ni les expropiacions

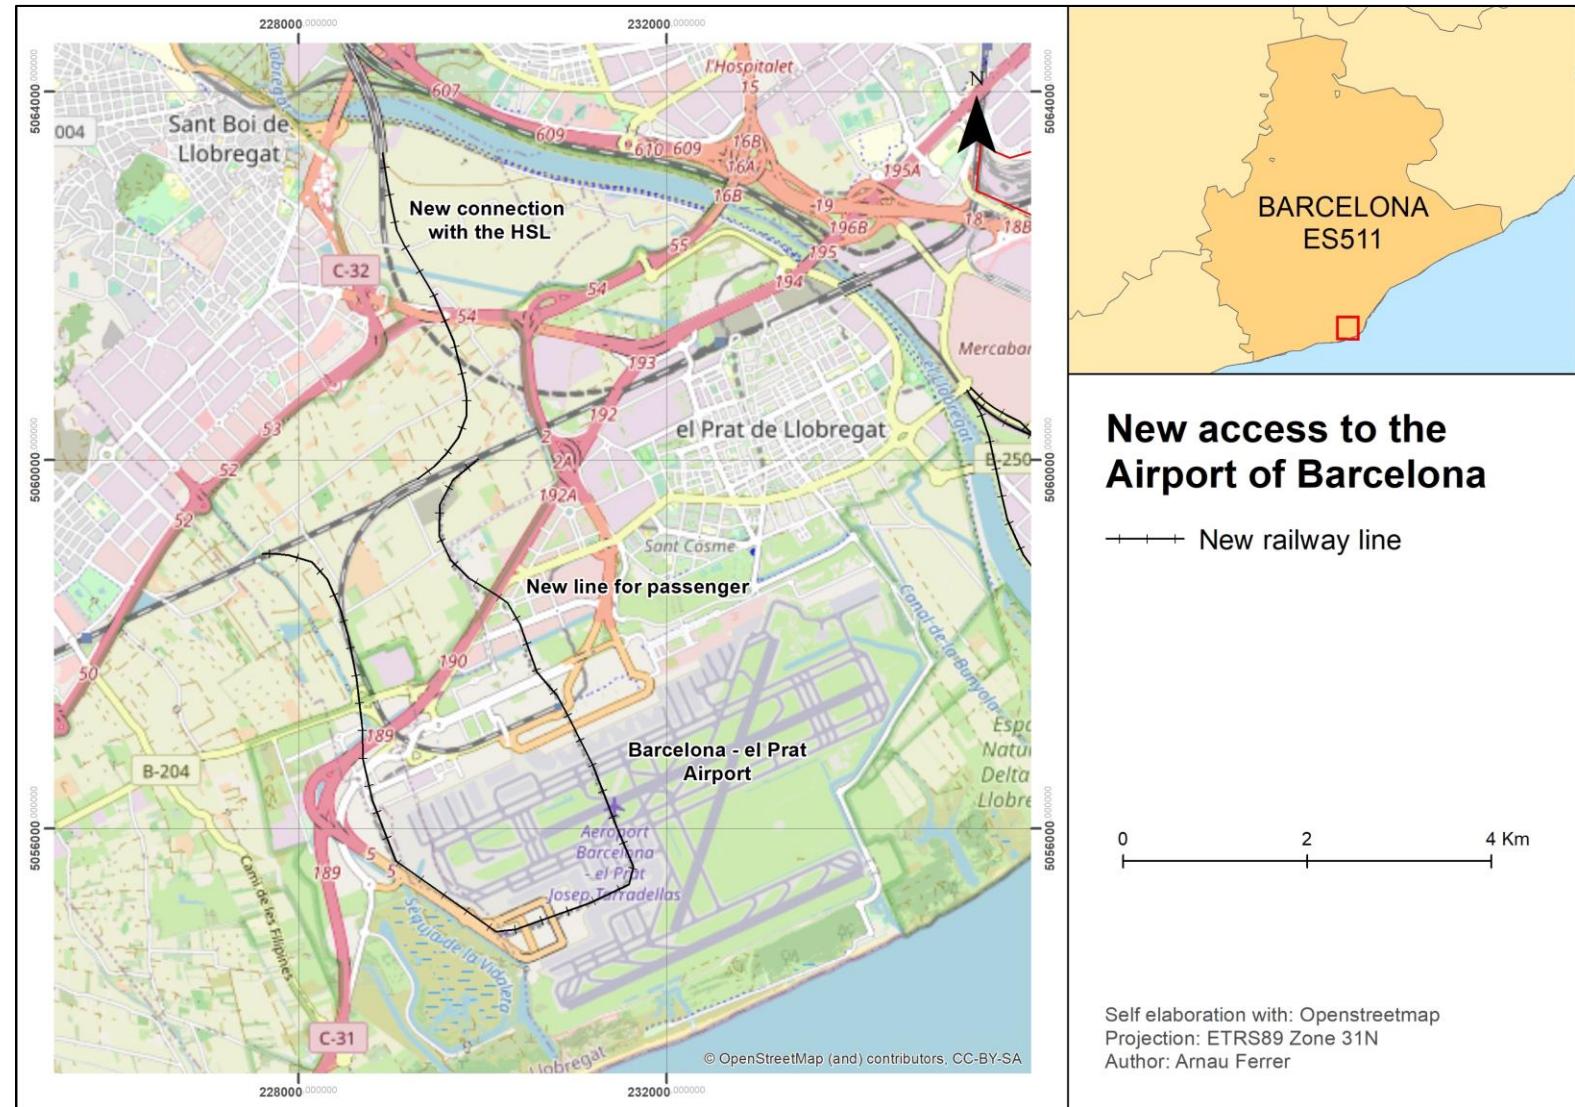

IMPROVEMENT ACTIONS IN THE INTERMODAL TERMINALS & INTERCONNECTION LINKS

New railway line between Cervera and Martorell
